Together, we can control your refrigeration cost — case by case across the entire organization.

Food retailers often look to their contractors to help reduce refrigeration costs in their supermarkets. To make the job easier, Sporlan's **Micro Thermo Case Control** is a powerful way to control costs like installation and maintenance, energy consumption or food loss due to poor temperature control. **Micro Thermo Case Control** is self contained which means fewer long wire pulls, decreasing installation time. The industry-leading total case control optimizes temperature control and superheat which enables an easier set-up and lowers energy requirements for refrigeration. Along with all of this advanced control, the **Micro Thermo Case Control** is a part of the Alliance enterprise system providing visibility and control of every case in every store across your enterprise. A simple case for a complex job.
