

023-0041 Space sensor with setpoint and override button

This space sensor is specially designed for Prolon VC500 and VC1000 controllers and can be mounted directly on a wall or to a box wall. For the most accurate results unit should be mounted on an inside wall, away from any air supply, exhausts and other source of heat or cold.

**Specification**

Operating Temperature	-20 to 70°C (-4 to 158°F)
Sensor Type	10kΩ type 3
Override button	Momentary close low current
Setpoint slider	Potentiometer of 10k 7.26kΩ at 21°C (70°F)

**Wiring**

The override switch on the sensor provides a momentary contact and should be wired in parallel with the sensor.

**Prolon VC500 or VC1000 controller**
