

# The REAL 3 micron Oil Filter

Sporlan OF Series

Sporlan introduced the OF-Series to combat small particle contamination issues in supermarket refrigeration systems with multiple compressors. Sporlan engineers crafted the ideal filter to address high quantities of 5 microns or smaller particles that cause excessive wear leading to premature compressor failure. The OF-Series filter has proven to effectively capture and retain large quantities of these damaging particles resulting in enhanced compressor life and fewer filter replacements.

Many manufacturers have attempted to emulate this high performance oil filter including the recently re-launched AOFD 553 oil filter drier. Sporlan contracted with IBR Laboratories to test multiple AOFD 553 units as well as multiple Sporlan OF-303s for a side-by-side comparison.

## The side-by-side comparison results are astonishing!

- AOFD 553 had **21X more contaminants** in the oil than the Sporlan OF-303.
- Sporlan OF 303 had **61% more contaminant holding capacity** than the AOFD 553 at the recommended change-out pressure drop.
- AOFD 553 captured **<5% of the 3 microns particles** in the oil.
- OF-303 captured **99% of the 3 micron particles** as advertised.

Since 1934, Sporlan has been bringing the best products to the industry backed by the best technical service. Protect your investment with a high performance Sporlan OF-303 oil filter made right here in America. You can find the entire series of OF Oil Filters at one of the more than 1,500 local Sporlan Authorized Wholesale branches.
