

MTSL-1012  
July 14, 2014

**TO: MT SALES DISTRIBUTION**

**SUBJECT: ALLIANCE VERSION 7.2.2 RELEASE**

We are pleased to announce the release of Micro Thermo Technologies™ MT Alliance™ version 7.2.2. Beginning July 14, 2014, all new PCs and Data Loggers will ship with this version. An upgrade kit is also available for all existing installations of Alliance 5.0.7 or higher.

Alliance 7.2.2 includes the first product launched on the MT-700 Series hardware platform. The new MT-700 Sensor Node features 18-inputs and eight calculation blocks. Other upgrades available in this release include:

- New Broadcast feature for the Case Controller, where the node software is sent to all controllers simultaneously, saving hours when upgrading larger sites.
- Improved performance when opening and navigating the TC-Rack plug-in.
- Added support for additional Sporlan and Danfoss valves, and much more.

Additional details of the update are included in the attached internal release announcement.

**PLEASE NOTE:** the attached document is for your reference and can be used to create additional communication to your customers – but should not to be sent to individuals outside of Parker.

Regards,

Eric Rist  
Assistant Product Manager – RAC Electronics  
Parker Hannifin – Instrumentation Group
