TO: MT SALES DISTRIBUTION

SUBJECT: ALLIANCE VERSION 7.2

On November 29, 2013, Micro Thermo Technologies released version 7.2 of the Alliance Platform. Since this date, all new data loggers have shipped with 7.2 installed.

In addition to normal patch updates, this version includes several upgrades to the Case Controller firmware and Plug-In. Key updates include in this version:

- The Case Controller is now compatible with the Circuit Controller for defrost scheduling and coordination;
- The Case Controller includes a new solenoid valve feature, which enables an unused relay to control a liquid line solenoid;
- Added support for the Sporlan CDS-2 Pressure Regulating Valve;
- Minor updates in the Refrigeration System Config application, as well as a few plug-ins.

Additional details of the update are included in the attached internal release announcement.

PLEASE NOTE: the attached document is for your reference and can be used to create additional communication to your customers – but it is not to be sent to individuals outside of Parker.
